

Name _____ Class _____ Date _____

1 Tick the correct boxes to show some of the differences between summer and winter in the UK.

	Summer	Winter
a Days are longer than nights.	<input type="checkbox"/>	<input type="checkbox"/>
b Sun is low in the sky at midday.	<input type="checkbox"/>	<input type="checkbox"/>
c Northern hemisphere is tilted towards the Sun.	<input type="checkbox"/>	<input type="checkbox"/>
d Happens in June, July and August.	<input type="checkbox"/>	<input type="checkbox"/>

2 The diagrams show a stick placed in the ground in winter and in summer. The stick makes a shadow when the Sun is shining.

The shadow for winter has been drawn for you. Draw in the shadow the stick will make in summer.

3 The text in the box describes a day in winter.

It was still dark when Sal had to get up for school. She put on a t-shirt under her school blouse to make sure she stayed warm during the day. After breakfast she pulled on her thick coat and woolly hat and gloves before leaving the house. The path outside was slippery with frost.

Sal walked around the playground at lunchtime. The Sun was low in the sky and didn't feel very warm, so she didn't stay out long. The Sun was just setting when she waited for the bus to go home after school.

- Underline the parts of the story that would be different if it were describing a day in summer.
- In your book, write two paragraphs that describe Sal's day at school in summer.

I can...

- describe the differences in the seasons
- explain the differences in terms of the tilt of the Earth's axis.
