

Name \_\_\_\_\_ Class \_\_\_\_\_ Date \_\_\_\_\_

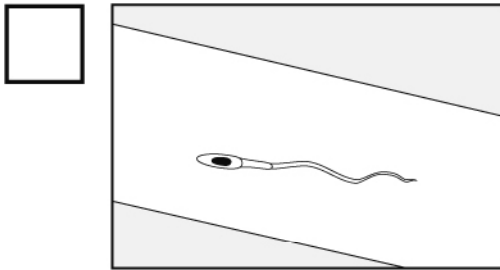

- 1 Number the drawings to show the order in which they occur.
- 2 Complete the descriptions by filling in the missing words.

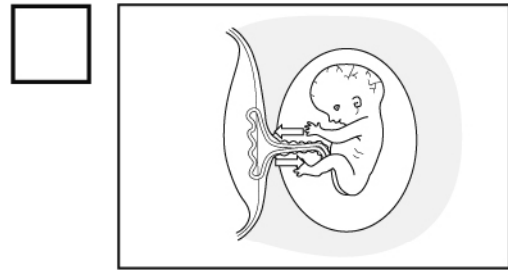

The \_\_\_\_\_ egg cell divides into a ball of cells, and becomes an \_\_\_\_\_.

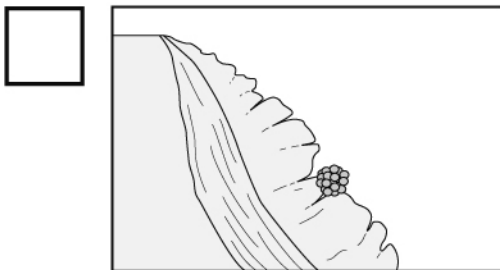

If a sperm cell meets an egg cell, \_\_\_\_\_ can occur.

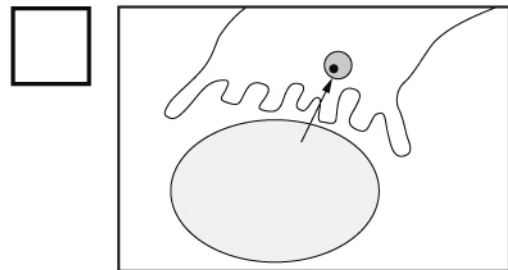

After sexual intercourse, \_\_\_\_\_ cells reach the top of the uterus and then swim down an \_\_\_\_\_.

The developing baby gets what it needs from its mother through the \_\_\_\_\_. It is protected by \_\_\_\_\_ fluid.

The \_\_\_\_\_ travels down the oviduct and \_\_\_\_\_ into the uterus lining.

Each month an \_\_\_\_\_ releases an egg cell into an \_\_\_\_\_.

**I can...**

- describe how sexual intercourse can lead to the implantation of an embryo
- describe how an embryo is protected and cared for in the uterus.
